

SLH2-36

High Energy Signal Line Protection

The Novaris SLH2 range provides 20kA high energy surge protection for balanced pair signaling circuits with line currents up to 2.5A.

Multistage protection

Following the primary GDT is a series coordinating impedance followed by a metal oxide varistor clamping circuit providing a safe voltage protection level for the connected equipment.

Pluggable design

The protection circuitry is contained within a removable top module. This pluggable design allows for easy removal and replacement. Reliable gold-plated connectors are used between top and base modules.

Earthing

The SLH2 range utilizes a base which can be locked to the DIN rail by a screw that also provides an earth termination.

Failsafe design

In the event of excessive surge current, a fuse will rupture, preventing a short circuit to earth.

Indication and alarm

In the event of a failure a red indicating flag on the module will be activated. A normally closed alarm contact will open providing a means for remote condition monitoring.
